

Stats Functions Cheat Sheet

Definition

to be added....

Equations

Mean

$$mean = \mu = \frac{\text{sum of observations}}{\text{number of observations}} = \frac{\sum x_i}{n}$$

Standard Deviation

$$\text{standard deviation} = \sigma = \sqrt{\frac{1}{N} \sum (x_i - \mu)^2}$$

Variance

$$variance = \sigma^2 = \frac{1}{N} \sum (x_i - \mu)^2$$

Bayes Theorem

$$P(A|B) = \frac{P(B|A) \cdot P(A)}{P(B)}$$

Normal Distribution

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{1}{2} \frac{x-\mu}{\sigma}^2}$$

$$P(X < x) = P\left(\frac{x - \mu_x}{\sigma} < Z\right) \rightarrow \text{use table}$$

$$P(X \geq x) = 1 - P(X < x)$$

Poisson Distribution

$$P(X = k) = \frac{\lambda^k e^{-\lambda}}{k!}$$

R Overview

BASICS:

Creating a variable

```
newNum <- 1423  
newString <- "Yoshi"
```

Creating a new list of numbers:

```
newList <- c(1,2,3,4,5)
```

Creating a new list of Strings (words)

```
newList <- c("Yoshi", "Sally")
```

STATISTIC FUNCTIONS:

Simple Functions:

- Five number summary
 - `fivenum(newList)`
- Mean
 - `mean(newList)`
- Median
 - `median(newList)`
- Mode
 - `mode(newList)`
- Standard Deviation
 - `sd(newList)`
- Variance
 - `var(newList)`
- Number of items
 - `length(newList)`

Normal Distribution

- Solve PDF
 - `dnorm(x, mean, sd)`
- Get probability
 - `pnorm(quantity, mean, sd , lower.tail)`
- Get quantity
 - `qnorm(probability, mean, sd , lower.tail)`

Poisson Distribution

- Solve Poisson PDF
 - `dpois(x, mean, sd)`
- Get probability of certain number of successes
 - `pnorm(number of successes, lambda)`
- Get number of successes from probability
 - `qnorm(percentile, lambda)`

IMPORTING DATA:

- Ensure file is in current working directory
- `headers = true` if first line has titles

```
importedData <- read.tables("TextFileName.txt", header = TRUE)
```

DATA SET FILTERS:

```
newDataSet <- data.frame(owner = c("Joel", "Joel", "Joel", "Brie", "Brie"))
```

```
name = c("Sally", "Bonzes", "Ghido", "Feather Cow", "Gray Cow"))
```

Getting a specific column:

```
names <- newDataSet$name
```

Filter based off of column:

```
bries_friends <- newDataSet[newDataSet$owner == "Brie",]
```

GRAPHS:

Histogram:

```
histData <- c(4,6,2,5,3,6,4,2,4)
hist(data1, main = "TITLE", xlab = "X AXIS LABEL")
```

Bar Graph

```
freq <- c(31,30,31)
label <- c("October", "November", "December")
barplot(freq, names.arg = label, xlab = "Month", ylab = "Number of days")
```

Boxplot:

```
data1 <- c(19,17,23,20,19)
data2 <- c(23,27,25,24,25,25)
labels <- c("name1", "name2")
boxplot(data1, data2, name = , main = "TITLE", ylab = "Y AXIS LABEL", xlab = "X AXIS LABEL")
```

Appendix:
